

VOLATILITY INDICES

Introduction to Volatility Trading.

Volatility is a Market Simulation that operates 24/7.

It's based on price algorithms of demand and supply that's traded on a daily basis.

Binary.com is the only broker that trades Volatility Assets

Volatility indices are traded the same way like Forex.

Volatility is gotten from the word Volatile, which means it's a volatile asset, unlike Forex.

To trade Volatility Indices, you need to register and sign up with a Binary.com broker and open a demo and live account at metatrader 5.

Volatility is traded on MT5 platform.

You download mt5 from your app store for Android or PC version.

On your mt5, you input your log in details and password after you search for Binary.com Ltd at mt5

You can fund your account with as little as \$5.

You can fund your account through Master Card or Virtual Money, Perfect Money and Skrill, most popular

Your fund reflects in your account immediately.

You can also fund your account through BTC

Withdrawal through Master Card takes at least 5 working days but virtual account withdrawal 24 hours

If you withdraw with virtual money, you can sell to individuals or sell to reputable online exchangers like Instantgold.com, topupgold.com, naira2usd.com, etc

If you are selling to individuals, always use escrow, in case of fraudsters.

Volatility trading requires good knowledge of Market Trend and Patience.

It's both the easiest to trade and loose money.

You need to mortify your Greed for quick money if you want to be successful in trading volatility Indices.

Types of Volatility Indices:

(1) V10

(2) V25

(3) V50

(4) V75

(5) HF V10

(6) HF V25

(7) HF V50

The above are the Volatility Assets traded on binary.com mt5

Spread in Volatility:

The value of spread determines price momentum, profitability and losses.

V75 has the highest spread and most volatile.

It can turn you to instant millionaire and send you to village also.

Volatility 100 is the least volatile.

Your lots size on each of the above index determines the spread.

Most of the Volatility Indices has minimum lots size

In V75, you can use lots size 0.01 which is the minimum

You can also use lots size of 0.01 for V100 but since the spread in v100 is not as much as that of v75, you need to increase your lots size to get a good pips

The minimum lots size in V50 is 0.5 lots size

You can trade with this depending your equity

In V10, the minimum lots size is 0.1 which can increase depending your lots size

In V25, the minimum lots size is 0.5, you may increase it depending your lots size

LIST LOT SIZE GUIDE FOR ACCOUNT OF \$100, YOU CAN NOW INCREASE A LITTLE BASED ON YOUR ACCOUNT SIZE WITH THIS CALCULATION.
