

THE GOLDEN BULLET STRATEGY

The Definitive Reference Guide to Getting Funded in One Trade

By **Waqar** | WWA Trading | Titans of Tomorrow

"A restricted trader is a profitable trader."

01

THE PROP FIRM GAME: UNDERSTAND THE RULES

THE REALITY

99% of traders fail prop firm accounts. Only 0.4% reach payout #2. The odds are designed against you.

Even great traders with great stats fail because they don't have a strategy FOR prop firms. Market strategy is only half the equation.

THE GAME

Prop firms are simulated environments. Evaluation fees = their revenue. Payouts = their cost.

Rules (trailing drawdown, daily limits, consistency rules) exist to maximize your failure rate. Understand this.

THE APPROACH

Treat evaluations as a game with rules you can exploit. **Aggressive in evaluation. Conservative when funded.**

Your downside = account purchase fee. Your upside = tens of thousands in payouts.

THE DATA

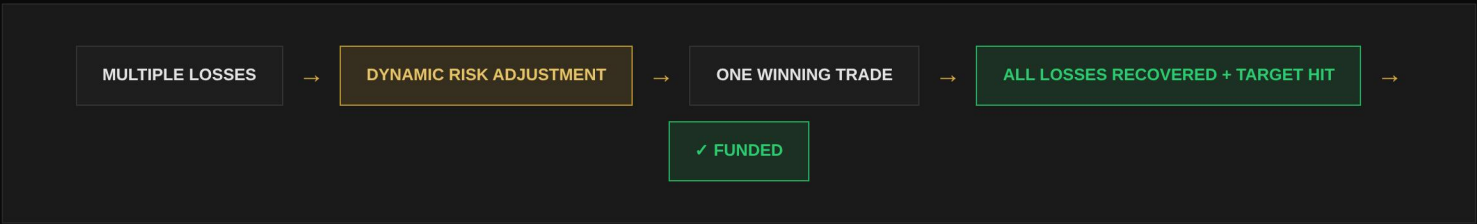

Seven-figure prop traders spent **\$100K-\$400K** on evaluations to earn **\$1M+** in payouts.

That's a 1:4 to 1:10 R:R on the business model itself.

"Even an average trader with a good prop firm strategy can make a lot of money. Your trading edge is gasoline — this system is the fire."

02

ONE SHOT. ONE TRADE. FUNDED.

EVEN AFTER 9 LOSSES

One winning trade with correctly calculated risk recovers all losses AND hits the profit target simultaneously

DYNAMIC RISK

The tracker adjusts your risk after each trade. Losses increase risk slightly:

1% → 1.4% → 1.7% → 2% → 2.3%

Never exceeds drawdown limits.

ASYMMETRIC R:R

Your risk-to-reward on each winning trade is amplified by partial profits.

2% risk → \$12,000+ return

TP system multiplies the R.

RULE COMPLIANCE

Every suggestion stays within max daily loss (5%) and max drawdown (10%).

Aggressive within the rules, never outside them.

03

CONFIGURE YOUR MASTER KEY

INPUT	DESCRIPTION	TYPICAL VALUES
Account Size	Your prop firm account	\$10K / \$25K / \$50K / \$100K / \$200K
Phase	Evaluation stage	Phase 1 or Phase 2
Profit Target	% gain required to pass	Phase 1: 8% (some 10%) · Phase 2: 5%
Max Drawdown	Overall loss limit	Typically 10%
Max Daily Loss	Single-day loss limit	Typically 5%
Trades to Pass	Winning trades to target	1 (aggressive) · 2-3 (consistency rule)
Win Rate	Expected short-term win rate	30%-70% (for 2-10 trades)

💡 PRO TIP

Your win rate input is for the evaluation period only (2-10 trades). A 50% win rate over 5 trades is vastly more achievable than over 1,000 trades. Even 30-40% is sufficient. This is not asking for the world.

04

CONFIGURE YOUR TAKE-PROFIT SYSTEM

Configure up to 3 take-profit levels. Each level has a Risk:Reward ratio and Volume percentage. Total volume must equal 100%.

Waqar's Configuration			
Level	R:R	Volume	R-Gain
TP1	1:3	50%	1.5R
TP2	1:10	50%	5.0R
Full Win	—	100%	6.5R
Partial (TP1)	—	50%	1.5R
Loss	—	—	-1R

Simple Alternative			
For single-TP traders:			
Level	R:R	Volume	R-Gain
TP1	—	0%	—
TP2	1:4	100%	4R
If you don't have a TP system, use Waqar's: 1:3 and 1:10 with 50/50 volume split. This is the same system behind the 59.5% gain track record.			

05

THE HIDDEN TAX — DON'T IGNORE IT

Input	Description	Typical Value
Average Spread	Per-trade spread in pips	0 - 0.5 pips
Average Commission	Broker commission per lot	~\$7/lot

 **WARNING**

Spread and commission eat into profits on every trade — win, loss, or break even. Especially damaging with high trade frequency. The tracker factors these into ALL calculations so there are no surprises.

06

FOLLOW THE DASHBOARD. TURN YOUR BRAIN OFF.

CURRENT BALANCE \$93,800	PROFIT TARGET \$108,000	DISTANCE TO TARGET \$14,200	MAX DD REMAINING \$3,800
★ SUGGESTED RISK % 2.33%	★ SUGGESTED RISK \$ \$2,186	TRADE COUNT 4	RUNNING WIN RATE 0%

The suggested risk is **THE answer**. You do not override it. You do not second-guess it. The system has factored in your account size, your drawdown, your TP system, your win rate, your costs, and your goals. **Trust the system.**

Display	What it Shows	Why it Matters
Current Balance	Live balance after all trades	Know exactly where you stand
Profit Target	Dollar amount to pass	Your finish line
Distance to Target	\$ still needed (increases if in drawdown)	The real gap — not just the 8%

Max DD Remaining	Room left before account blown	Your safety net
★ SUGGESTED RISK	THE KEY OUTPUT — exact % for next trade	Follow this. Period.
Flash Warnings	⚠ Approaching limits	Last-trade-before-breach alerts

07

EXACT LOT SIZE. ZERO GUESSWORK.

POSITION SIZE CALCULATOR

Trading Pair

Stop Loss

5 pips

Commission + Spread

Factored in ✓

POSITION SIZE

31.98 lots

💡 SCALPING CONTEXT

Average stop-loss for M1 scalping: 3-7 pips

London first hour average move: ~25 pips

With a 5-pip SL, TP1 at 1:3 = just 15 pips. You're not even shooting for the average move.

PROCESS

1. Select trading pair (forex majors)

2. Risk amount auto-populated from dashboard

3. Account balance auto-populated

4. Input your stop-loss size (pips)

5. Commission + spread auto-factored

6. Output: Exact lot size

9 losses out of 14 trades — one golden bullet gets you funded

09

THE GOLDEN RULES

- 1

THIS IS FOR EVALUATION ONLY.
Do not use aggressive risk on funded accounts.
- 2

FOLLOW THE TRACKER'S SUGGESTED RISK.
Do not override it. Do not adjust it. Do not "feel" your way through risk management.
- 3

YOUR DOWNSIDE IS THE ACCOUNT FEE.
Not the drawdown. Not the loss streak. The \$50-\$500 evaluation purchase. That's your real risk.
- 4

WIN RATE DOESN'T NEED TO BE HIGH.
30-40% over 5-10 trades is sufficient. You're trading for a week, not a year.
- 5

ONE TRADE CAN FIX EVERYTHING.
5 losses in a row? 9% in drawdown? One golden bullet recovers it all AND gets you funded.
- 6

BLOW ACCOUNTS. IT'S OKAY.
Buy many, blow some, pass some. Reinvest payouts. Your R:R is account fees vs payouts.
- 7

NEVER BREACH DAILY LOSS.
The tracker keeps you safe, but pay attention to flash warnings.
- 8

FACTOR IN YOUR COSTS.
Spread and commission are hidden taxes. Make sure you input them correctly.
- 9

CONSISTENCY RULES EXIST.
If your prop firm limits single-trade profit contribution, set "Trades to Pass" to 2 or 3.
- 10

A RESTRICTED TRADER IS A PROFITABLE TRADER.
Follow the system. Follow the rules. Discipline is the edge.

10

THE PATH TO \$1M IN FUNDING

1. BUY

Multiple evaluation accounts (\$50-\$500 each)

THE BUSINESS MODEL

Seven-figure prop traders:

2. TRADE

Follow Golden Bullet. Aggressive. Fast. 1-3 trades to pass.

3. BLOW SOME

Expected. Factored into cost. Not a failure — business expense.

4. PASS SOME

Even 2 out of 5 accounts passing is a win.

5. COLLECT PAYOUTS

5% on \$100K funded = \$5,000

6. REINVEST

Payout profits fund the next round of evaluations.

7. REPEAT → SCALE

More accounts. More funding. More payouts.

Evaluation Spend

\$100K-\$400K

Payouts Earned

\$1M+

Risk:Reward

1:4 to 1:10

You're not gambling. You're investing in a business model.

\$1M FUNDING

Across 3-4 top prop firms. At 5% payout = \$50,000. Life-changing from one conservative month.

11 TRADE WITH THE RIGHT FIRMS

1

Funded Next

Largest, most recognized, verified \$100M+ payouts

2

Alpha Capital

Strong reputation, 5+ years, global brand

3

FTMO

Industry pioneer, most established

4

Funding Pips

Competitive conditions, trusted

5

The 5%ers

Proven track record, solid community

⚠️ AVOID

Prop firms that are:

- Brand new (< 1 year)
- Owned by influencers
- No verifiable payout history
- Operate without transparency

Your money is safest with the top 5.

12 INSIGHTS FROM 100+ SEVEN-FIGURE TRADERS

01

The session pip range is your friend.

London first hour averages ~25 pips on EUR/USD. With a 5-pip stop, TP1 at 1:3 = 15 pips. You're not even targeting the full average move.

02

You can profit from wrong trades. ~30% of Waqar's 59.5% gain came from trades that didn't hit final TP. Partial wins at TP1 generate profit even when the trade doesn't fully work out.

03

Win rate is a choice, not a performance metric. You can force a 90% win rate by taking 1 trade per year. Lower win rates = more trade frequency = higher rate of return.

04

Your psychology problem is actually a system problem. When the tracker tells you exactly what to risk, there's nothing to be emotional about. Decisions are pre-made.

05

Don't spend months on evaluations. The longer you trade an evaluation, the more chances for mistakes, rule changes, or psychological fatigue. Speed is an advantage.

06

Counter-trend requires two legs of confirmation. Don't sell into a bull run on one bearish candle. Wait for two legs of bearish structure before considering counter-trend.

07

Divergence between correlated pairs confirms inducements. When EUR/USD makes a lower low but GBP/USD respects the same level, the EUR/USD move is likely manipulation.

08

If you miss a setup, let it go. No chasing. No FOMO. The next key time window will present another opportunity. A restricted trader is a profitable trader.

09

Phase 2 is easier than Phase 1. Only 5% target vs 8%. The tracker suggests even lower risk (0.7% on \$100K). One winning trade clears it easily.

10

The account purchase is your stop loss for the business. Your SL = \$50-\$500. Your TP = \$5,000-\$50,000. That's the real R:R.
